

## Leapster2 Learning Game System

Available Summer 2008 | Ages 4 to 8 | MSRP: \$69.99

The Leapster2 handheld is the newest member of the Leapster® family of Learning Game Systems—the number-one educational gaming platform, with more than 4.6 million sold in the US. The USB-enabled Leapster2 system offers a sleek new form and online connectivity to give parents the inside track on what their little gamers are learning. Using the included PC- and Mac-compatible LeapFrog® Connect Application, parents can create customized profiles for their kids on LeapFrog’s Learning Path, then connect the Leapster2 handheld to the computer to see the skills and concepts kids are practicing every time they play. As children progress along their individualized Learning Path, parents can help guide the learning and access further content to match their kids’ interests and needs. When kids connect, the points they’ve earned during gameplay upload and unlock online rewards—and a sneak peek at further rewards to work for. As with the original Leapster system, the Leapster2 handheld auto-levels, adjusting games to children’s particular skills and progress, so players are appropriately challenged.

## Leapster System Software Library

Available Summer 2008 | Ages 4 to 8 | MSRP: \$24.99 each

Five brand-new Leapster titles are available at the launch of the Leapster2 handheld, plus refreshed versions of 10 of the most popular legacy titles. All titles are optimized for the Leapster2 handheld’s LeapFrog Learning Path connectivity.

The entire 33-title library of Leapster system learning games is compatible with all Leapster family platforms and features new online content for kids and Learning Path updates for parents.
